

**Summary of ICCR Dioxin Subgroup Teleconference  
Stationary Combustion Turbine Work Group  
August 21, 1997 (1:00 to 3:00 pm)**

**Decisions/Discussion:**

- Subgroup will postpone discussion about dioxin until after the Dioxin Primer has been developed in order to reduce duplication of efforts.
- Subgroup will develop a statistical rationale for removing certain pollutants from the potential list of pollutants for which to test.
- Subgroup will focus on searching for statistics experts to determine reliability of data points close to the detection limits (within the practical quantification limits).
- Sam Gieryn would like not to exclude pollutants for which there hasn't been thorough testing (i.e., different fuel types: digester, landfill gas, diesel, natural gas, field gas.)
- Postpone presentation to CC until November Meeting in Houston.

**Action Items:**

- G. Adams and S. Roy: Contact Bill Teliart and Randy Seeker to see if they know any statistics experts (for information on measurements close to detection limits).
- G. Adams: Ask Randy Seeker to discuss detection limits and practical quantification limits at next presentation to CC.
- Sims Roy: Contact T. Harrison to obtain database used to determine pollutant list developed by TMPWG.
- GRI: Look for EPA/industry experts (for information on measurements close to detection limits.)
- GRI: Contact IGT about mercury in fuel analysis.
